

GEORGE PARKINSON- FINAL DAY OF PLANT PROJECT 24/04/20

There certainly are some funny looking plants around, ive found a few you may be interested in!

Don't you think this plant looks like it has lots of eyeballs HAHA

Actaea
pachypoda

Actaea pachypoda or baneberry is a small ball type plant: this plant is native to North American forests. It is also called as doll's eye because of its special

shaped fruits. These fruits are Toxic!!!!!!!DONT EAT!!!!!!

BASEBALL PLANT found mainly in South Africa. The plant has exactly the same shape of a baseball. (I WOULD WANT TO KICK IT!!!) It is an unbranched plant with an average height of 20 cm. The special species of baseball plant is protected by national nature conservation as it is very rare in the world.

My parents think this looks like a pin cushion!

- *Male and female flowers of euphorbia obesa grow on different plants.*
- *Baseball plants are quite toxic, makes severe skin problems.*

A few more on the next page!!

I think this looks like sick!!! My mum thinks it looks like a trifle!!!! Lots of cheerios haha!!

Hydnellum Peckii

This plant apparently stinks!!! It a fungus that produces blood or juice type fluid! Known as bleeding tooth fungus! Found in North America and Europe!

TO FINISH OFF! WE HAVE THIS VERY LARGE STRANGE LOOKING PLANT!
DON'T YOU THINK IT LOOKS LIKE IT HAS A HOLE IN IT.

THIS IS CALLED THE RAFFLESIA ARNOLDII it is the biggest individual flower in the world!!!! WOW. It is mainly found in forests of Sumatra. It will grow up to a size of three feet!!! This plant also smells!!!!
